PROFILE SUMMARY

Electronics and Computer Engineering student specializing in AI/ML and Software Development. Built multiple scalable systems including ML pipelines, embedded systems, and full-stack applications. Focused on optimizing performance, automation, and real-world impact.

PROJECT EXPERIENCE

AI Educational Video Generator

- Automated video generation pipeline reducing manual effort by ~80% and improving content consistency.
- Generated structured 2-minute videos with optimized animation flow using LLM + Manim.

Deep Learning Music Generator

- Developed transformer-based model to generate MIDI music sequences from training data.
- Implemented sequence modeling and achieved coherent multi-instrument outputs with improved musical structure.

Student Mental Health Analysis

- Built ML models on structured datasets improving prediction insights by ~25%.
- Integrated DBMS for efficient querying and scalable data handling.

PhotoSpeakWrite

- Developed ML pipeline achieving real-time conversion of inputs into robotic arm instructions.
- Reduced execution latency and improved system responsiveness.

CCTV Streaming Platform

- Built secure APIs supporting real-time streaming with authentication.
- Handled multiple concurrent video streams with optimized backend performance.

EDUCATION

Amrita Vishwa Vidyapeetham, Bengaluru

B.Tech Electronics and Computer Engineering

CGPA: 7.02 / 10 (Expected 2027)

Gopalan International School

PUC (2022)

TECHNICAL SKILLS

Python | Java | C | Kotlin | PyTorch | TensorFlow | Scikit-learn | NLP | Computer Vision | Flask | React | REST APIs | Git | Linux | MySQL | Manim

CERTIFICATIONS

UI/UX Design Certification | Java Developer Certification | Java OOP Certification
